ADDITIONAL INFORMATION

- Numbers for 2/10/2022 reported through 2/5/2022. Cases are declining from the peak one about a week or two ago. It should be noted that the trend is good as it moves down but that numbers are still as high as the peak last winter. It is expected the decreasing trend should continue unless the new variant causes a spike in cases. It is also expected less testing will occur for the next few months as individuals that tested positive would not be PCR tested. If they become symptomatic in the 90-day window there is a possibility of infection with a second variant and they should get antigen testing. There have been 11 deaths in the county over the last 7 days. Hospitals remain at overcapacity.
